

Keyword Organization

This is a screen shot of TKME that illustrates the use of multiple Theme Keyword sections. The first Theme section contains the “ISO 19115 Topic Category” thesaurus (highlighted) and a single keyword chosen from the topic list.

The second Theme section does not contain a keyword thesaurus and can have as many keywords as needed to completely describe the layer.

ArcCatalog users should enter the “ISO 19115 Topic Category” thesaurus and a keyword from the list and then enter a second thesaurus element, adding the additional keywords under that second thesaurus. Please remember that keywords should not contain spaces.
